

Low Code and AI

The world is changing.

Industries are transforming rapidly

The drivers of economic growth are evolving

The world is more connected than ever

The opportunity is *yours* to
lead the AI transformation

AI and low code are the future

The percentage of the world's data produced by **generative AI** will jump from under 1% in 2021 to around 10% in 2025.¹

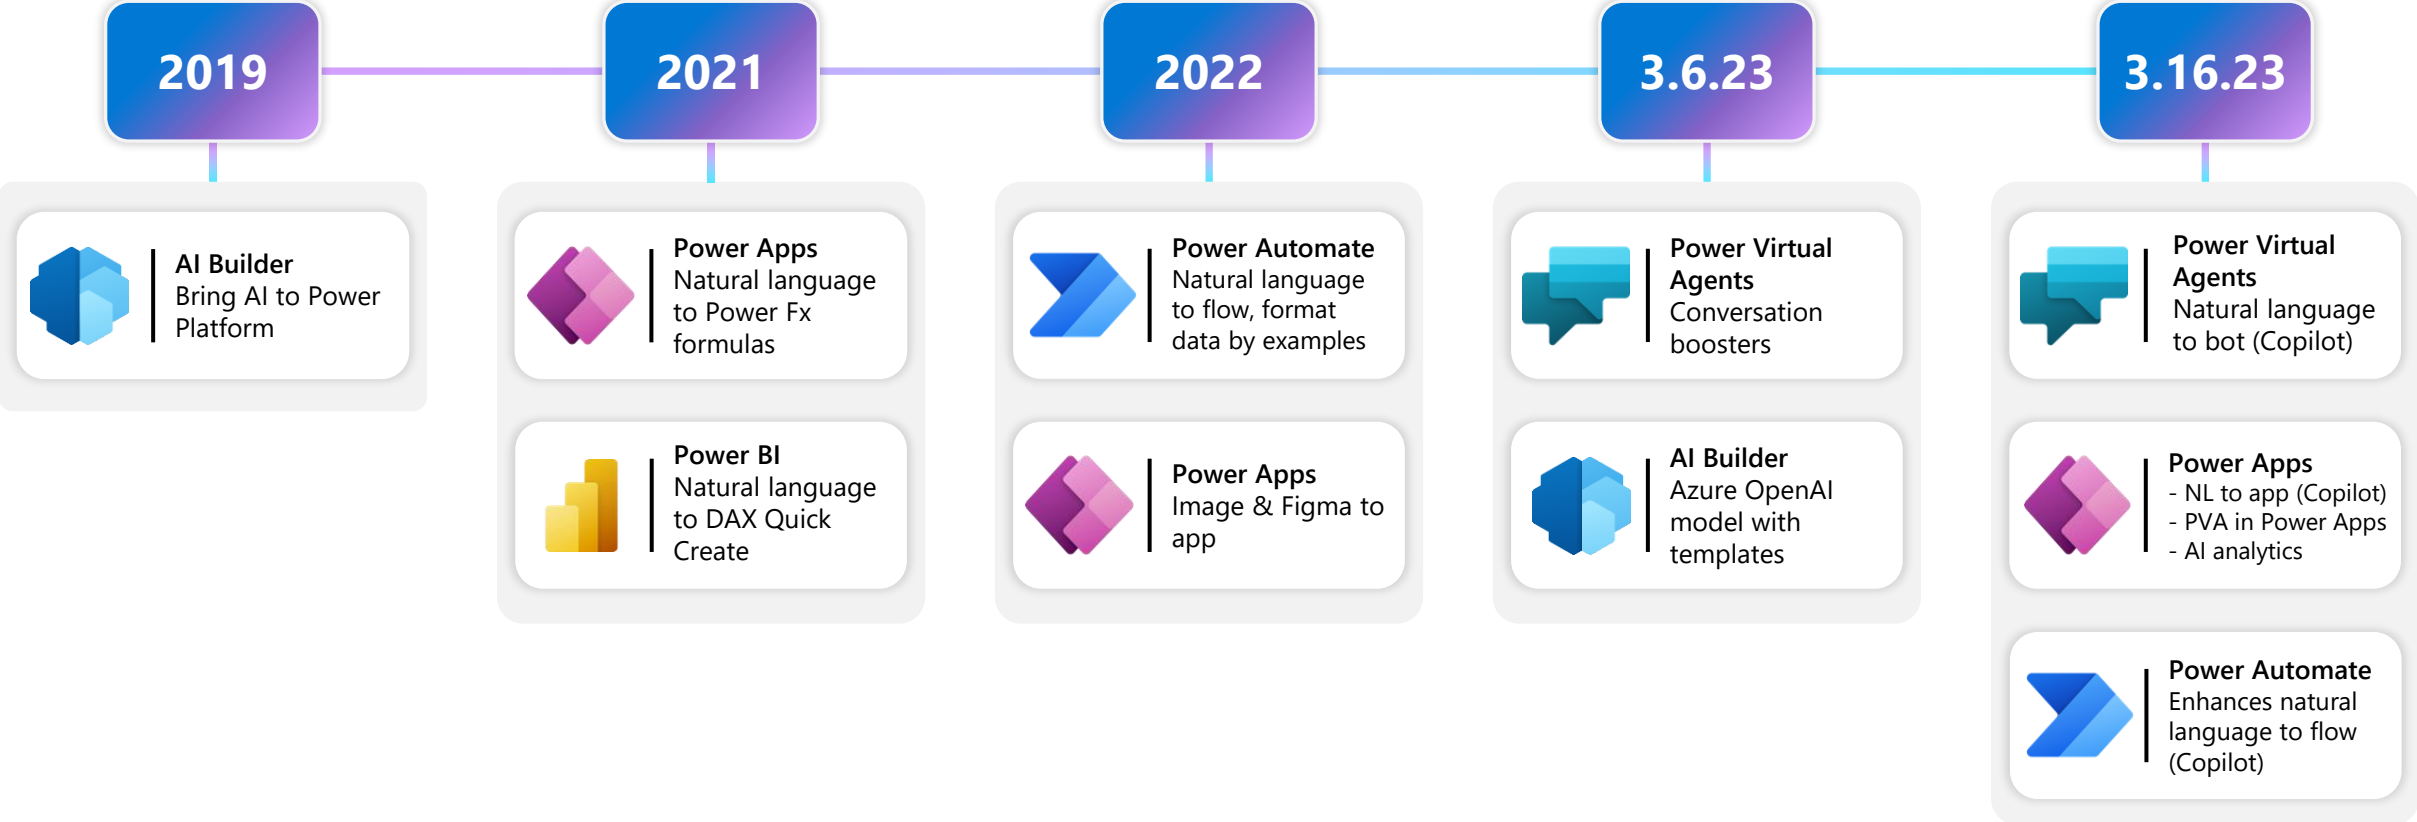

More than 65% of application development activity **will be low-code** by 2024.²

Power Apps

Ideas

Makers only need to describe their goal using natural language and Power Apps will generate code.

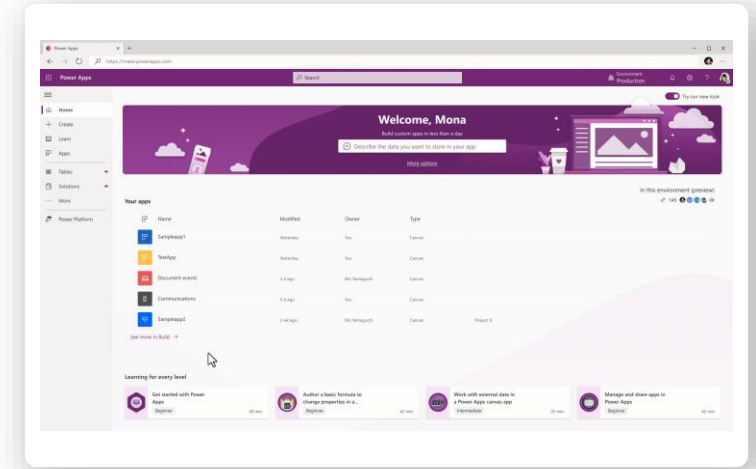

Save time and build more complex solutions by using natural language to give commands.

Express design

Auto-generate working apps and data within seconds from images and design files.

Accelerate app development and enable anyone to easily create a new app to scale development.

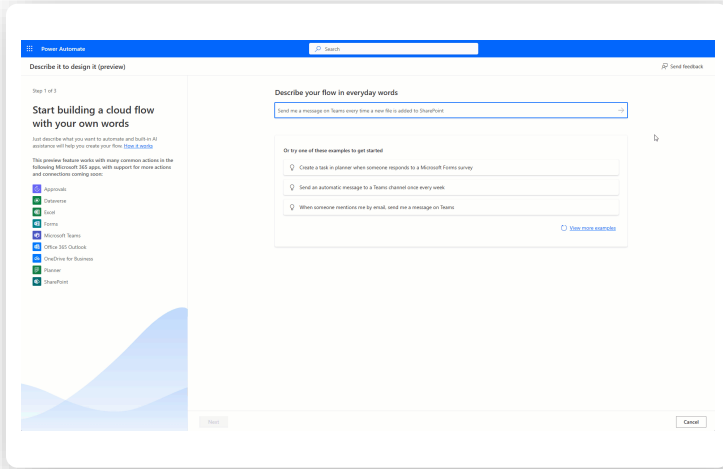

Copilot

Makers can build a complete app just by describing what they need in natural language.

Build, reimagine, and deploy business applications all through intuitive natural language.

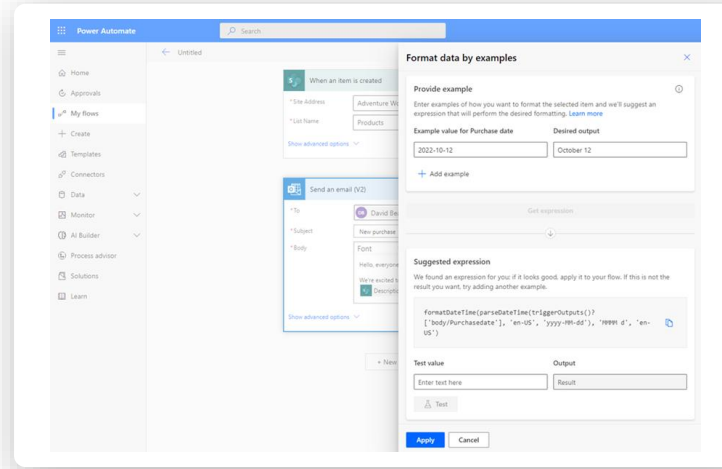

Power Automate

Natural language to flow

Describe what you want to automate, and an AI copilot will build your flow in seconds.

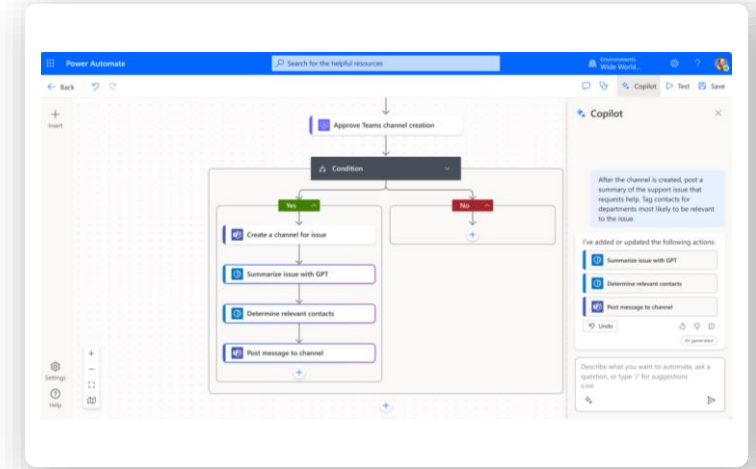

Speed up development by quickly creating flows from natural language descriptions.

Format data by examples

Provide examples of the desired output format and the copilot will automatically generate the formula.

Reduce time spent formatting your data by having the AI-based copilot clean up your data for you.

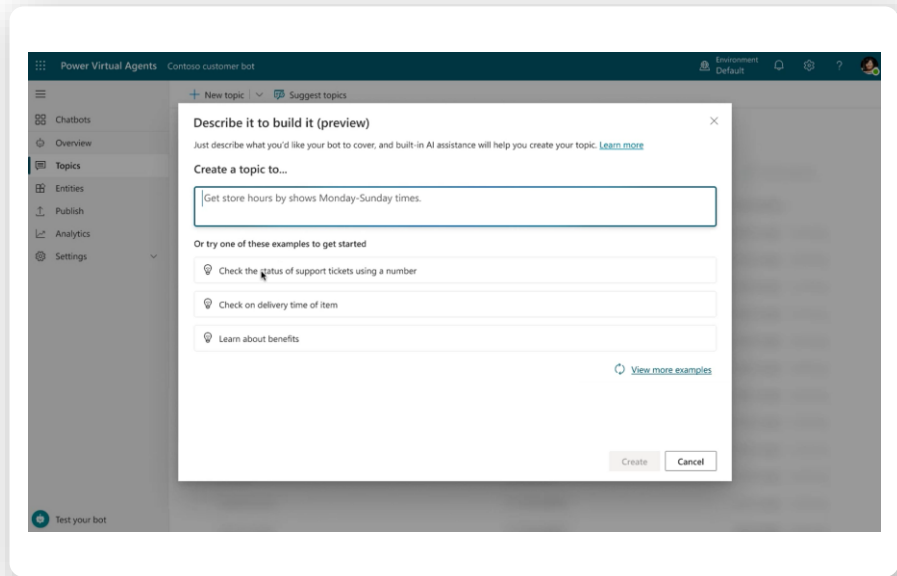

Copilot

Use natural language to edit and extend flows with an AI-based copilot.

Easily build and iterate on flows as the copilot helps remove blockers or extend your flow.

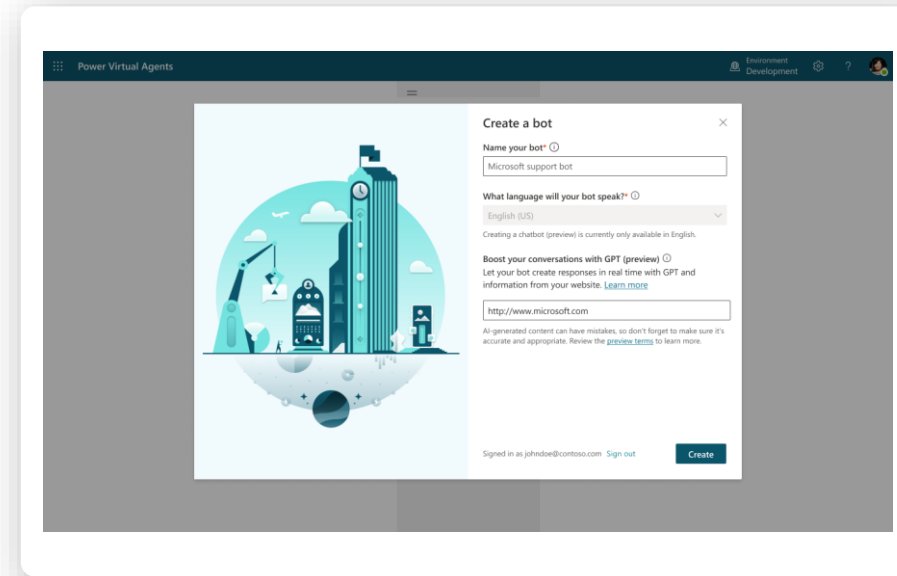

Power Virtual Agents

Copilot in Power Virtual Agents

Makers can quickly create and refine topics using natural language by "describing it to build it."

Reduce bot-generation time down to hours or even minutes by leveraging Power Virtual Agents copilot.

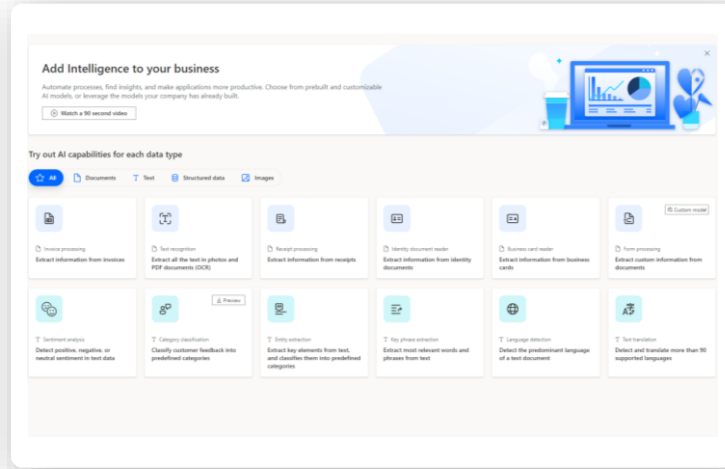

Conversation booster

Connect bots to the most current and useful data sources, like company websites, to answer questions in minutes, right out of the box.

Quickly create and deploy a functional bot, without having to manually author multiple topics.

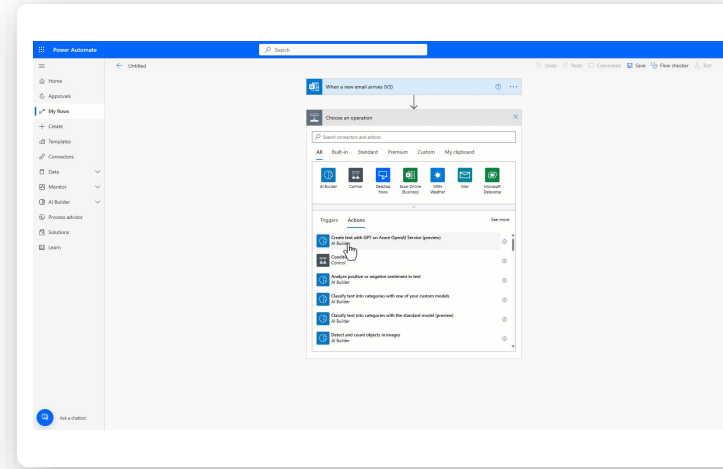

AI Builder

AI models

Democratized access to complex AI models including object detection, sentiment analysis, and many more.

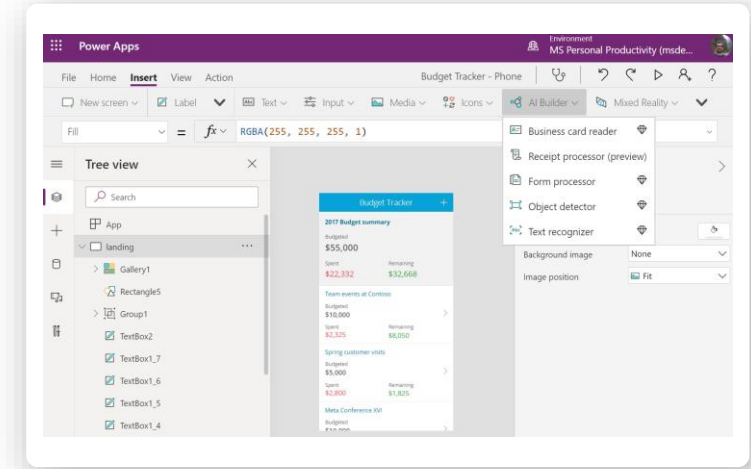

Simplify tasks, increase productivity and reduce time spent developing by easily applying AI models.

Create text with GPT model

The Azure OpenAI Service model enables users to embed intelligent text generation features with a few clicks.

Makers can interact with the model and build prompts for their workflow, reducing development time.

Integrate into your solutions

Easily embed generative AI into your low code solutions across Power Apps and Power Automate.

Reduce time to market by quickly and easily adding AI models to your applications and workflows.

Power Apps

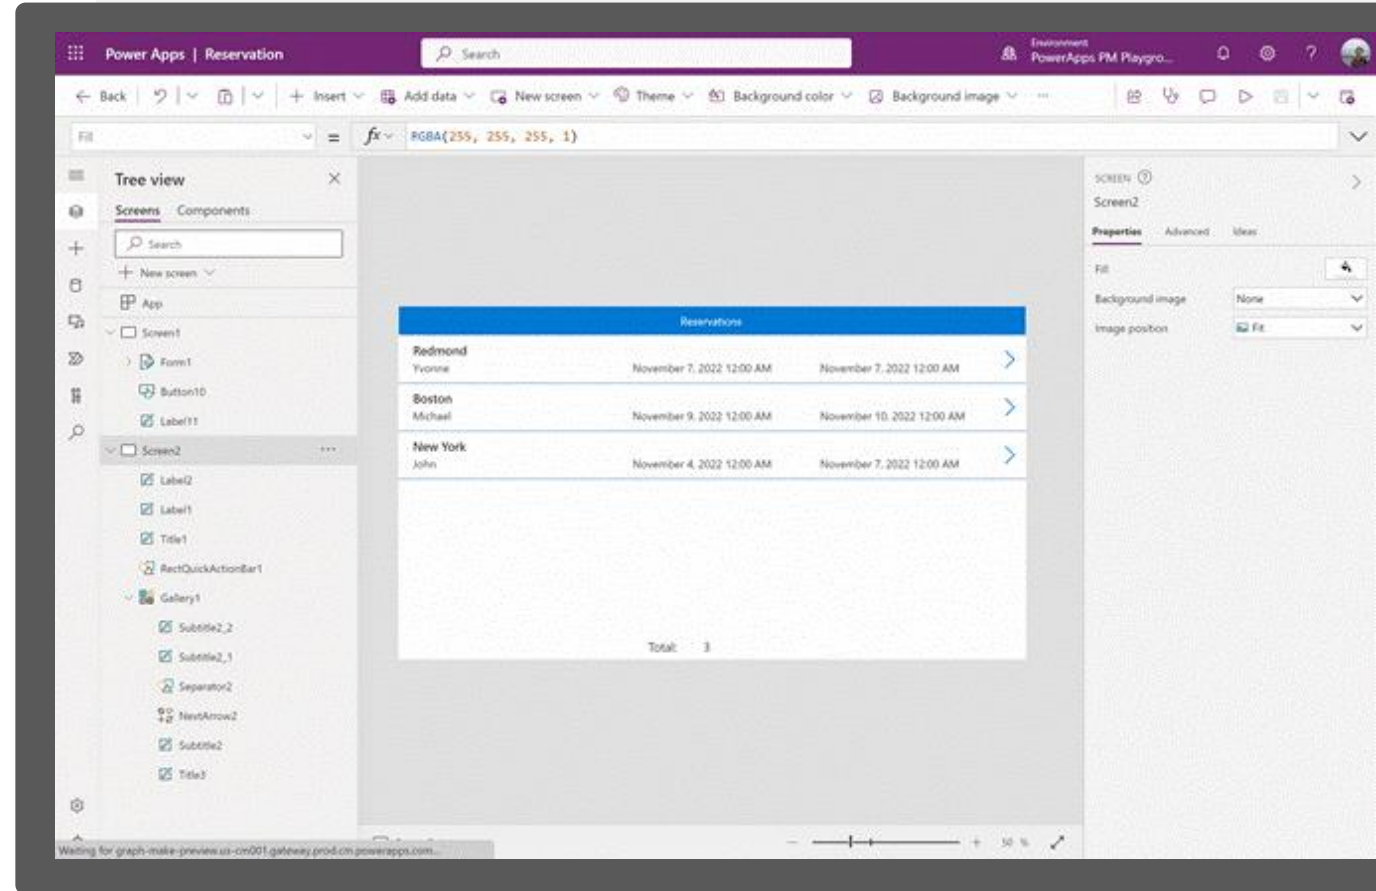

Power Apps ideas

Available in gallery, data table, labels, text input and dropdown controls

It now supports more formulas like counting and conditional formatting

Powered by GPT-3 for natural language understanding, and PROSE for by examples programming

Power Apps express design – Figma to app

Design your app using our [create apps from Figma UI kit](#)

Upload the link into Power Apps and name your app

A pixel perfect app will be generated for you based on your Figma design

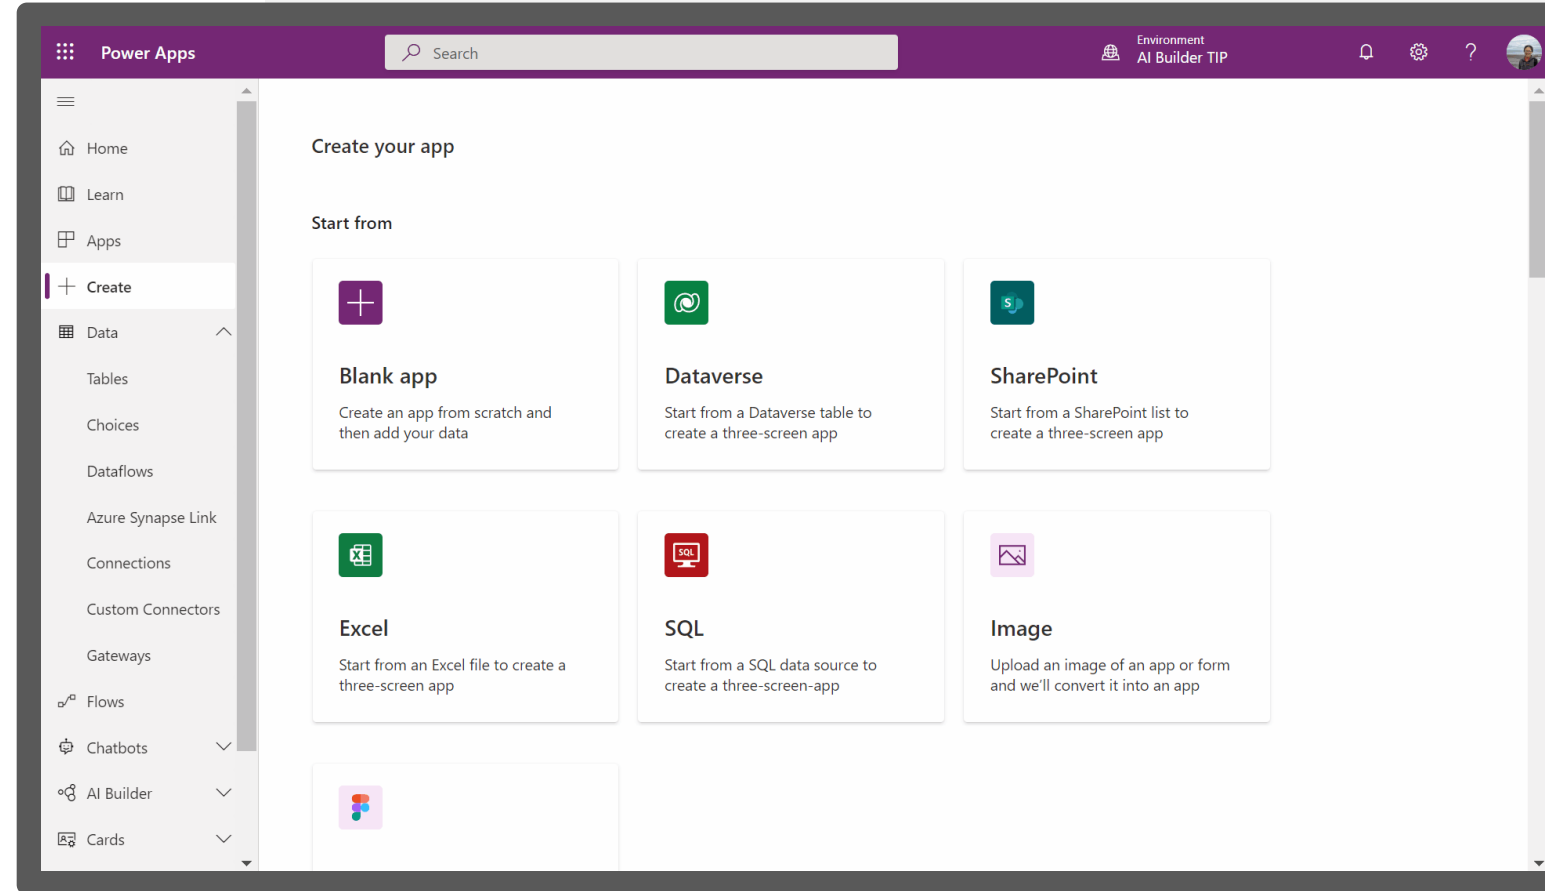

Power Apps express design – image to app

Upload an image and map its elements to Power Apps components

Manages most common controls like inputs, buttons, check box, drop downs, text inputs, etc.

Provides optional data set up steps for you to extract fields from the image and create a Dataverse table right away

A working app based off of the image content is generated automatically

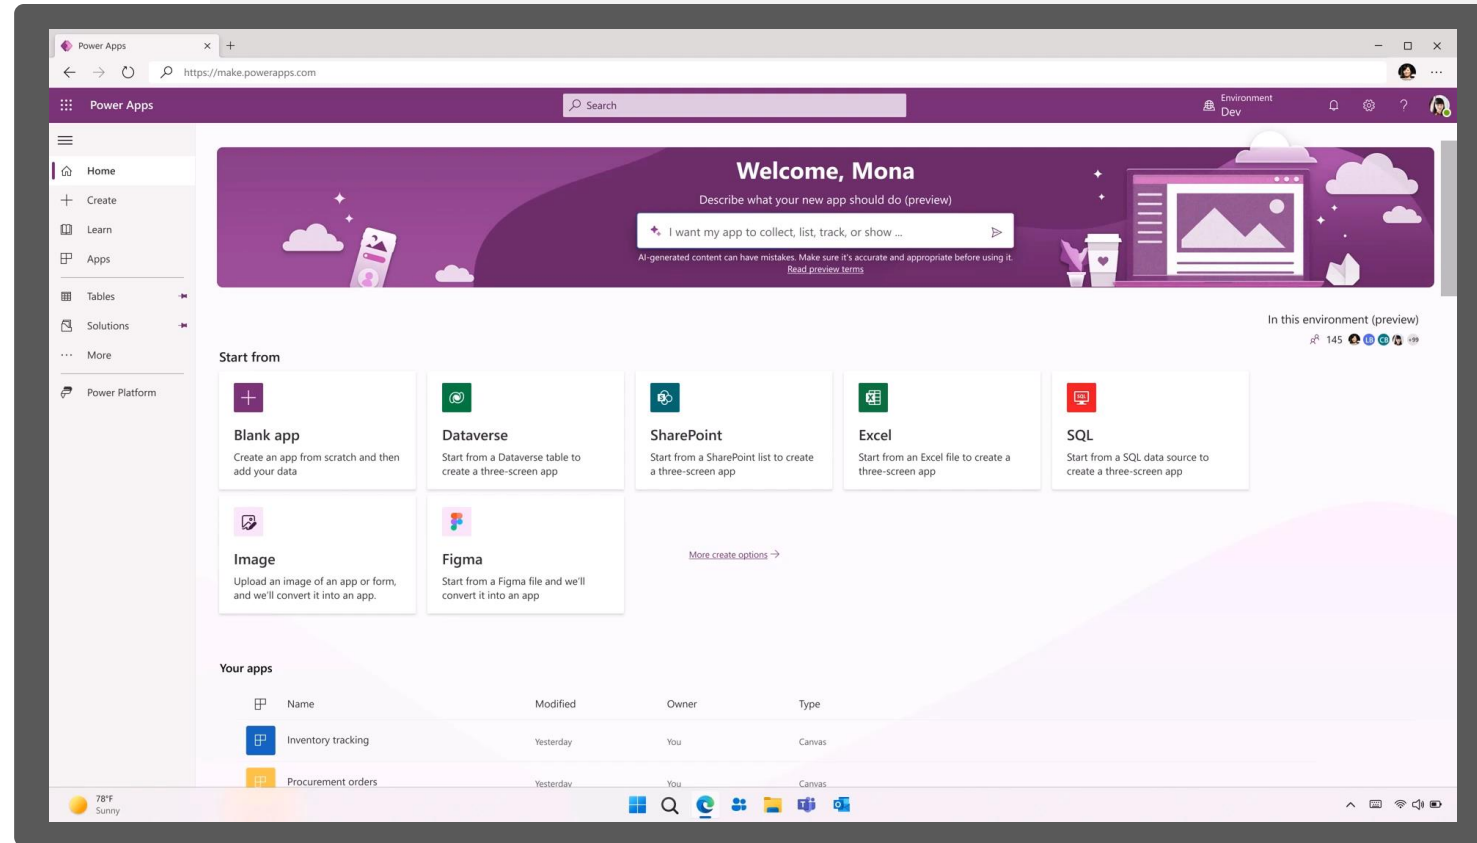

Introducing natural language development with copilot

Build new apps just by describing in natural language what you need

Multi-turn, multi-step conversation through the process of creating data and customizing UX

Makers can build a complete app over Dataverse by starting with natural language

No friction to use

Power Automate

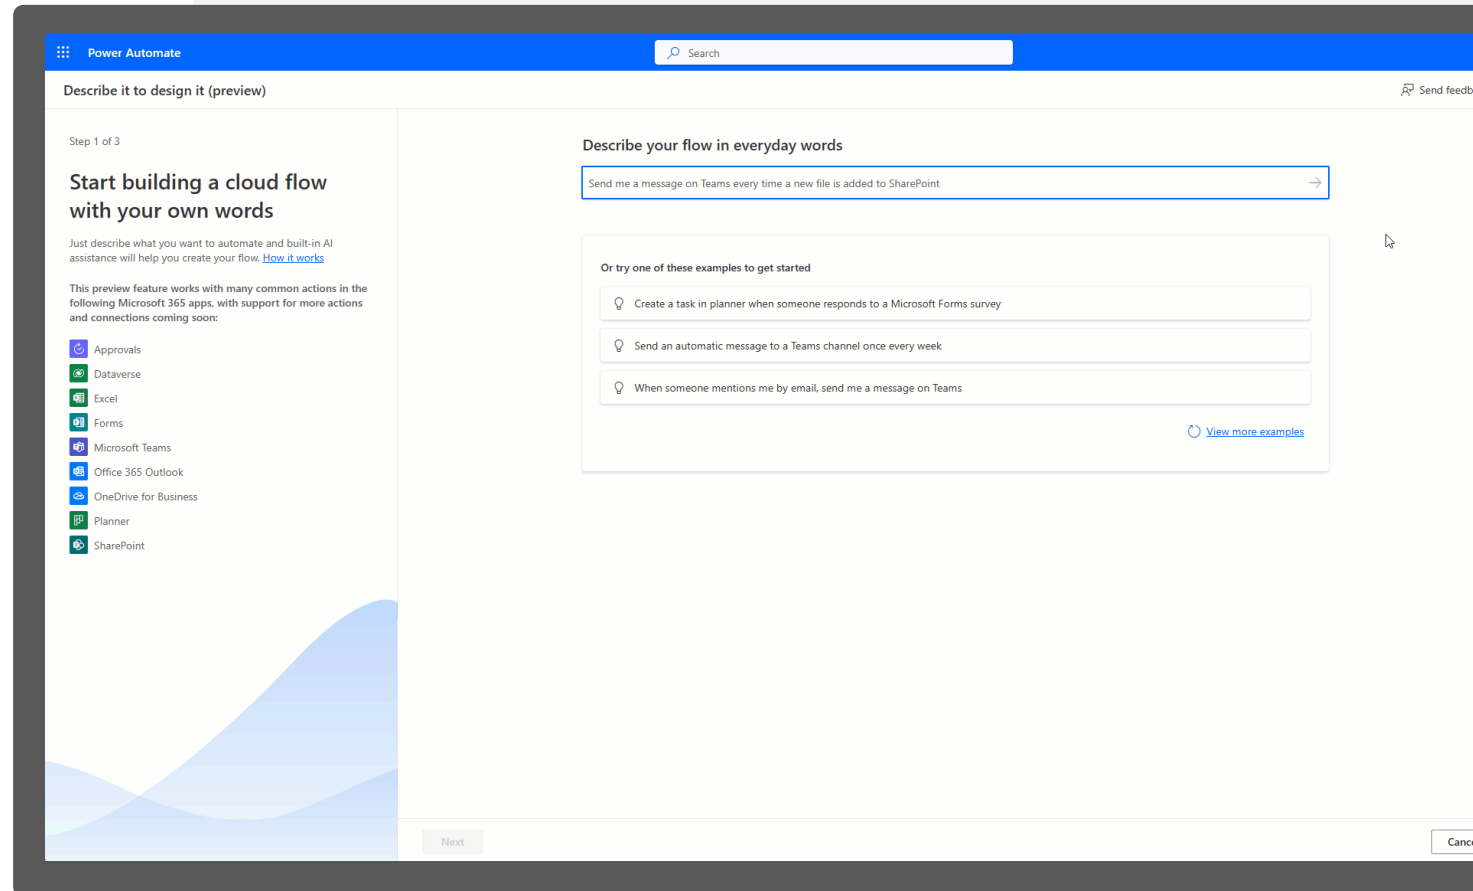

Transform natural language to automation

Bring ideas to life with AI powered automation development

Now you can **describe what you want** to automate in a sentence, and an AI-based copilot will build your flow in seconds

This new way to create flows runs on OpenAI Codex, an AI model descendant of GPT-3 that can **translate natural language to code**, in this case, Power Automate cloud flows

Format data by examples

Bring ideas to life with AI powered automation development

Now, it's simple for users to format data by examples with AI assistance

When you want to format text, dates, and numbers within your cloud flow, you can just provide examples of the desired output format and the copilot will automatically generate the expression formula to use

The screenshot displays the Power Automate interface with a 'Format data by examples' dialog box open. The dialog box is titled 'Format data by examples' and contains the following elements:

- Provide example:** A section where users can enter examples of how they want to format the selected item. It includes a text input field for 'Example value for Purchase date' (containing '2022-10-12') and a text input field for 'Desired output' (containing 'October 12'). There is an 'Add example' button below the inputs.
- Get expression:** A button to generate an expression based on the provided examples.
- Suggested expression:** A section showing a suggested expression: `formatDateTime(parseDateTime(triggerOutputs()?['body/Purchasedate']), 'en-US', 'yyyy-MM-dd'), 'MMMM d', 'en-US')`. Below the expression is a 'Test value' input field (containing 'Enter text here') and an 'Output' field (containing 'Result'). There is a 'Test' button below the input fields.
- Buttons:** 'Apply' and 'Cancel' buttons at the bottom of the dialog.

The background shows a Power Automate flow editor with a 'Send an email (V2)' action. The 'To' field is set to 'David Bel', the 'Subject' is 'New purchase', and the 'Body' is 'Hello, everyone'. The 'Format data by examples' dialog is overlaid on the right side of the flow editor.

Power Virtual Agents

Conversation booster

Allow customers to create a bot and specify a single web address. It will search the web address using Bing and summarize relevant results using GPT.

Traditionally, bots had a limited number of manually-authored topics and escalated to human agents when asked about anything else

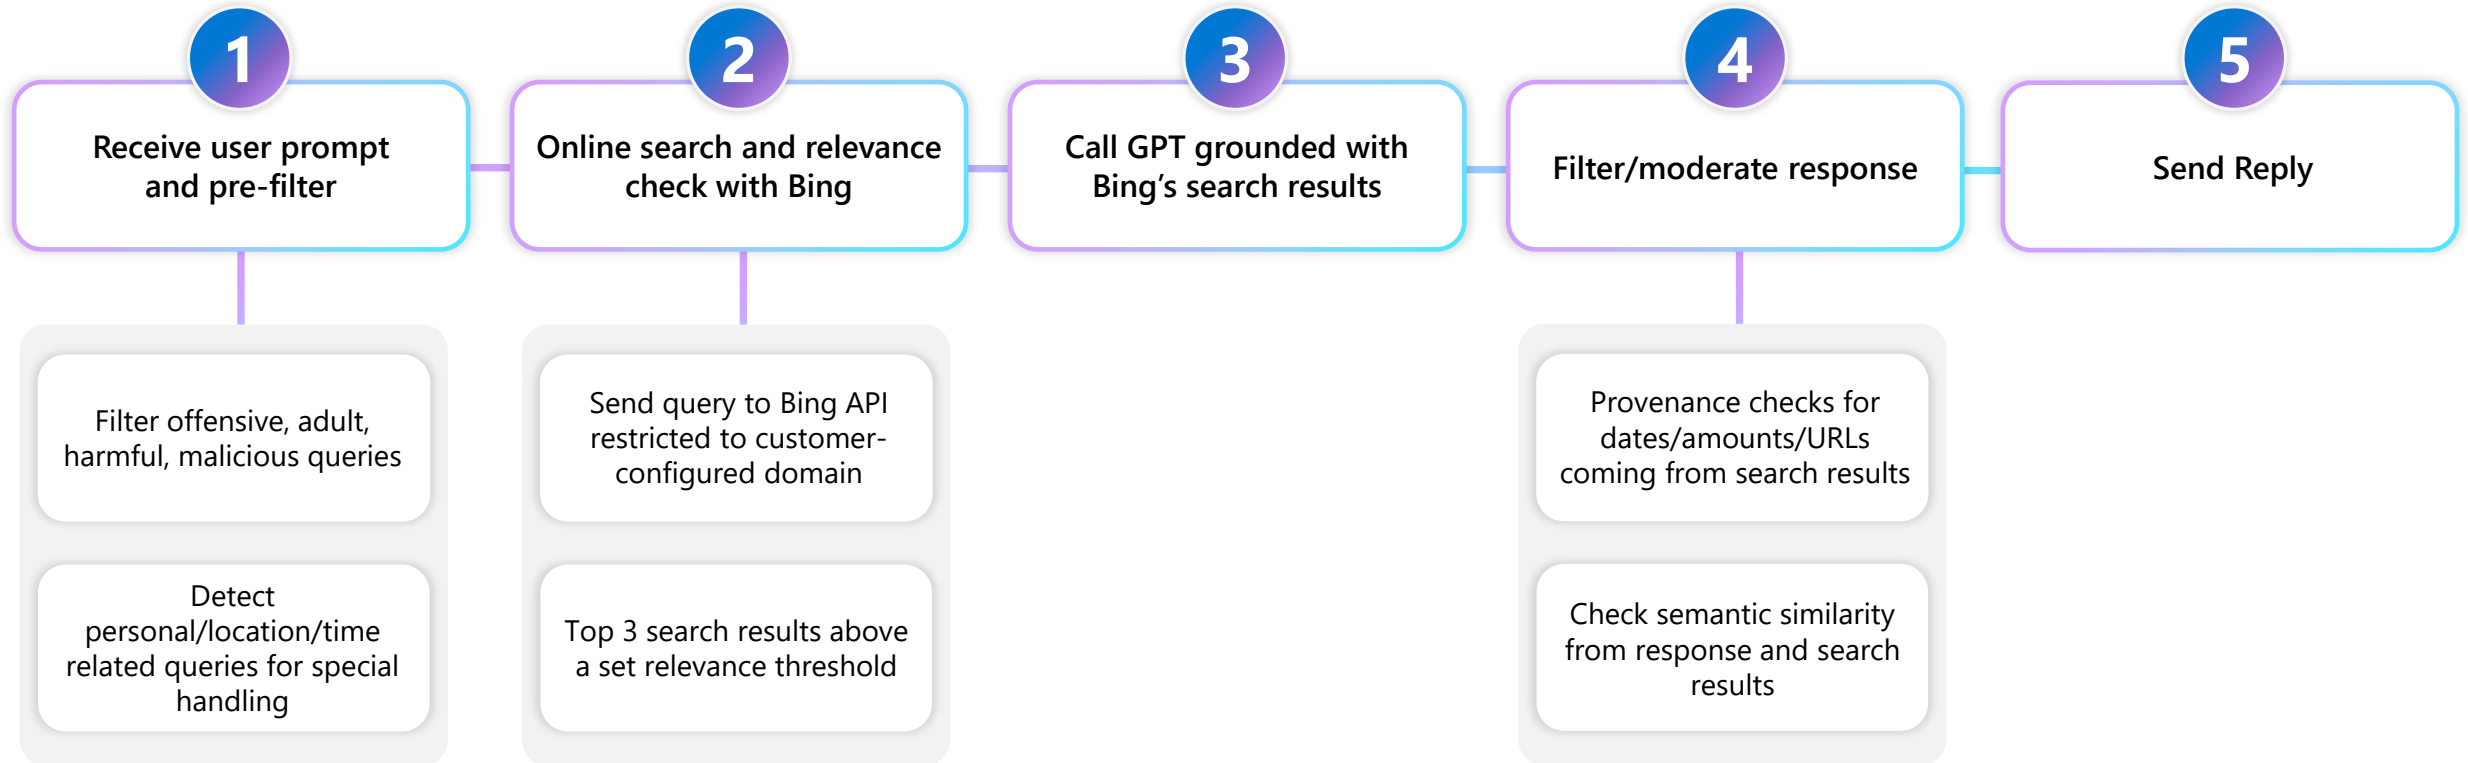

Boosting your conversations with GPT addresses this by first querying over the tenant's website, support materials, agent manuals, KBs etc.– and then using GPT to summarize the relevant results

Bots will be able to answer tenant-specific questions out of the box. Longer-term, we can build per-tenant models as access and cost improves

Conversations boosters – 5 steps

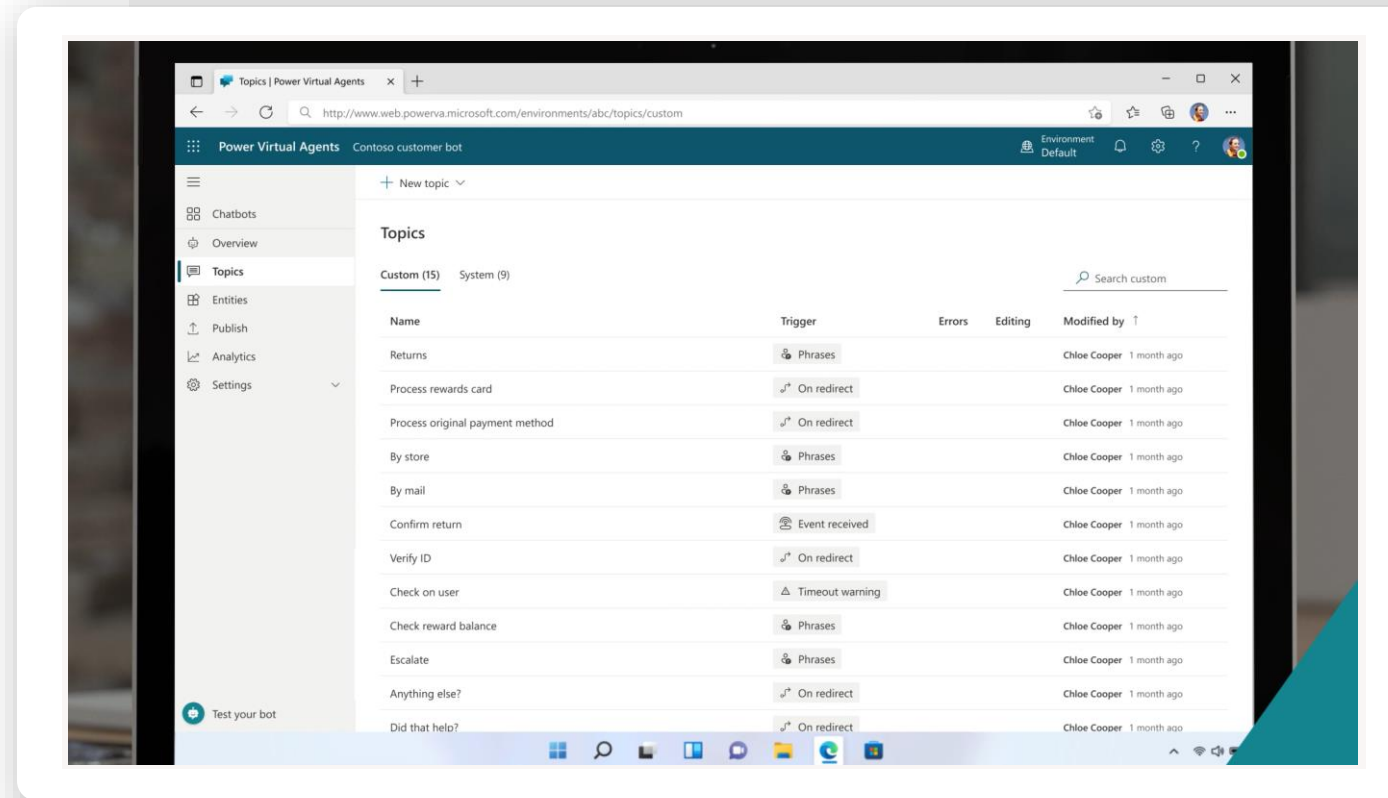

Copilot

AI assistance in building topics, designing and modifying the bot all through natural language.

Pro code bots took months to author
PVA bots took days to weeks to author

A user can provide a prompt that will result in a fully-functional dialog created in the tooling

The user can then select part of the dialog and use additional prompts to refine it – or use PVA's graphical UX to tweak it manually

Preview March 2023

Copilot with GPT – 5 Steps

1

Maker describes what to build with natural language

What do you want to build?

Ask the user for their name, date of birth, SSN, gross income, and show a summary in a card. And ask them to confirm. Get SS in XX-XX-XXXX format

2

PVA constructs prompt and calls GPT

3

GPT returns PVA's YAML code and loads graphical and text-based PVA editor

4

Maker can refine the topic with natural language

5

Maker provides feedback

The screenshot displays the PVA editor interface. On the left, two question cards are visible. The first question is "What is your name?" with an "Identify" action and a "Person name" field. The second question is "What is your date of birth?" with an "Identify" action and a "Date and time" field. On the right, the corresponding YAML code is shown, defining the actions for each question and a final "SendMessage" action to display a summary card.

```
19 actions:
20 - kind: Question
21   id: Question_13vZgv
22   variable: Topic.Name
23   prompt: What is your name?
24   entity: PersonNamePrebuiltEntity
25
26 - kind: Question
27   id: Question_nJvork
28   variable: Topic.DOB
29   prompt: What is your date of birth?
30   entity: DatePrebuiltEntity
31
32 - kind: Question
33   id: Question_dCev4W
34   variable: Topic.SSN
35   prompt: What is your Social Security Number (XXX-XX-XXXX)
36   entity: StringPrebuiltEntity
37
38 - kind: Question
39   id: Question_JSvAKA
40   variable: Topic.GrossIncome
41   prompt: What is your gross income?
42   entity: NumberPrebuiltEntity
43
44 - kind: SendMessage
45   id: SendMessage_qp5yEs
